

Designed for today's fast track construction our line of R-MIX High Performance mixes keep projects moving forward, on time and on budget.

R-MIX F- this footing mix provides superior placement and early strength gain from slumps of 2-5". Belted, pumped or right off the truck this mix is designed to handle foundation work after an initial 24 hour set time, keeping residential and commercial crews moving.

R-MIX EXT- is a flat work mix designed for any exterior application where air entrained concrete is required or specified. Easily placed and finished the 4000 psi design strength is achieved typically in 7 days.

R-MIX EXT SUPER- combines the same features as our EXT but is enhanced with 5# of blended micro and macro fibers to eliminate the need for steel reinforcement on slabs 6" thick or greater. This recent fiber technology greatly reduces the labor costs commonly associated with tying steel, while improving safety concerns and job site clutter.

R-MIX PT- is a Commercial Post Tensioned mix designed for ease in placement with a pump, while providing superior finishing characteristics. With 3000 psi in less than 24hours, hotel, parking garages and other post tension projects can easily stay on the fast track, reducing labor and financing charges to the owner.

R-MIX FILTERCRETE- the latest in previous concrete technology designed for extreme freeze thaw conditions. When owners want to utilize their land for the business and not retention ponds, Filtercrete is a cost effective alternative.

R-MIX CCA- With sustainable construction the current buzz word, our CCA mix utilizes 50% recycled coarse aggregate, thus reducing the amount of concrete wasted in landfills.

R-MIX LS- this low shrink floor mix meets and exceeds the specifications of the largest big box stores, distribution centers and massive concrete applications. Designed to be workable with superior finishing features this mix performs well in all types of situations to reduce shrinkage, thus providing superior fork lift travel areas and floor finishes.

R-MIX Wall- applies the same technology as our R-MIX EXT but with better pumping features while reducing 'bug holes'. As with the EXT this mix provides early strength gain for early form stripping.

R-MIX FLOWABLE- fast and easily flowable this mix provides an approved and proven alternative to you back fill problems. Color can be added to aid in locating duct banks.

R-MIX CORE FILL- Easy to use, this core fill mix helps speed up the process of filling block cores whether pumped or poured from a 5 gallon bucket.
